

Technical Bulletin

Dodge Charger Police Cruiser / Mini Cooper S

As part of our ongoing commitment to customer satisfaction, we recently made an update to include instructions for inspecting the shifter/switch assembly.

We've received a small number of reports of the motor not working yet lights & sounds are functional. If your unit has lights/sounds and the battery charge indicator on the dashboard shows 'fully charged' but the motor doesn't work, it is most likely due to a loose connection behind the shifter switch.

There is an adhesive applied to the connectors on shifter/switch, but these can sometimes work themselves loose during shipping. Fixing it is as easy as connecting a speaker wire to your stereo system.

Please follow the below instructions to inspect your toy for loose connections;

<ol style="list-style-type: none">1. Turn the unit off2. Remove both seats.3. Disconnect the battery.4. Remove one Phillips screw from holding plate. (Figure 1)5. Set the holding plate and screw aside.	
<ol style="list-style-type: none">6. Remove shifter/switch assembly by pulling straight up on the base. (Figure 2).7. Make sure both black connectors are plugged in and all the wires are fully seated.8. Similar to speakers, gently push each wire into its receptacle to ensure it is fully seated. <p>**You can also dab an extra bit of silicone or glue at this juncture to prevent the wire from disconnecting again (Figure 3)</p>	
<ol style="list-style-type: none">9. Before reassembling the shifter/switch back into the body, test the motor function by reconnecting the battery and turning the unit on.10. Lift the back of the unit off the ground and press on the foot pedal.11. If both motors engage and the wheels spin then you can reassemble the unit. If the motors do not engage the wheels, please contact us for additional troubleshooting.	

Please contact us at **(877) 741-6154** if you have additional questions or feedback.
